

# *Children In Care Have Various Needs*

## ♥ Children with Behavioral Issues

- These children need therapeutic support in addition to quality parenting due to the extreme trauma they experienced.

## ♥ Sibling Sets

- Siblings thrive when they are together. Foster parents are needed to enhance these connections and alleviate the children's emotional pain and trauma.

## ♥ Teens

- Teens are typically the hardest to find foster and adoptive homes. They benefit from foster families who help support their unique needs, provide healthy boundaries and build positive relationships. Many of our teens in care are also in need of mentors.

## ♥ Children with Medical Needs

- These children need loving parents committed to caring and supporting them with their special medical needs. Specialized training and support are available to foster parents.
